

## October in the Garden:

\*Last feeding for Citrus trees with **EB Stone Organics Citrus and Fruit Tree food**. This feeding will keep the foliage greened up through the winter. It's important for plants to go into winter with the proper nutrition to keep them healthy through the cold months.

\*Plant **Shrubs, Trees, Vines and hardy Perennials!**

It's time to have some fun and add some new plants to your Landscape. Plant when daytime temperatures are on a downhill swing and the night time temperatures are cooler too. This gives plants a chance to start to root in before winter hits and cools the soil. Why not take advantage of an 8-10 week jump start on spring? Don't forget to pick up **Soil Booster Planting Mix** and **Starter fertilizer** while at the Nursery.

**\*Fertilize** the whole Landscape. Lawns, Trees, Shrubs, Groundcovers and Perennials that go into winter with energy reserves always perform better in Spring. This feeding allows plants to break dormancy with health and vigor in the spring and sustains evergreen growth through the cooler months. We have a full selection of commercial and organic fertilizers to meet your needs.

**\*Apply John and Bob's** soil building products to improve your soils' ability to process fertilizers, improve drainage by breaking up hard clay deposits and introducing microbes and minerals to the soil. This balanced system improves the soil dramatically and is applied 2x a year. These products can be applied at time of planting or around existing plants. No need to till or dig in!

**All products available at the Nursery!**
